

## **Single Course Exchange Program**

A Connecticut College student enrolled full-time in an undergraduate degree-seeking program and in residence on the Connecticut College campus may, with appropriate approval, enroll in ONE course per semester (fall or spring) at the United States Coast Guard Academy. Enrollment in the Single Course Exchange Program is subject to enrollment policies, including instructor permission and course restrictions, as well as space availability. Students may not enroll in an exchange course that is the same/similar in content to one offered at Connecticut College.

Students should pay attention to the academic calendars at the United States Coast Guard Academy (begin and end dates of the semester/when classes are held) since this may not coincide with Connecticut College's academic calendar.

## **Enrollment Process**

Students should contact the Registrar's office of the participating institution for information about enrolling in a specific course. If the participating institution permits enrollment in the course, students must complete two copies of the "Single Course Exchange Program Approval Form", available in the Registrar's Office (Fanning 105) and bring the forms to the Registrar's office at the participating institution. Please note that the forms require the approval and signatures of the student's adviser, class dean, and the department chair/program director (if applicable). The participating institution will retain one copy of the form and sign the other, which needs to be returned to the Registrar's office at Connecticut College in order to complete the enrollment process.

## **Course Policies**

Please be aware that the grade for the course will be posted to the Connecticut College transcript exactly as it is reported by the United States Coast Guard Academy. Connecticut College cannot change grades that have been awarded by another institution.

While enrolled in the exchange course, students are held responsible for the deadlines and policies of the United States Coast Guard Academy that apply to the course, including the institution's deadline to enroll and last day to withdraw. Students may not drop or withdraw from the course without approval from the participating institution, their adviser, and their class dean.

Sample Classes (Students need to meet all Prerequisite Requirements)

Electric Circuits & Machines

Electrical Engineering I

Engineering Materials Science

Environmental Engineering I and II

Fluid Mechanics

Marine Engineering

Materials for Civil and Construction Engineers

Mechanical Engineering Design

Mechanics of Materials

Principles of Naval Architecture

Signals, Systems & Transforms

Soil Mechanics

Statics & Engineering Design

Strength of Materials Intro

Structural Analysis

Steel Design

Thermal Systems Design
